

## Smart Bedside Solutions

### Patient Concierge Service

Bedside Station is patient infotainment terminal, customized to patient-centered. It installed a bedside for hospital inpatients and provide the work efficiency to the hospital staff.

- 1) The patient just stays their bed and only touch the screen to request the service such as charge the fluid, bed sheet, cleaning, issuing certificate and medical record. Also, available to check the total amount of bill and remain balanced.
- 2) Hospital staff can work more efficiently with fewer efforts by PACS and guidance of Hospitalization and Discharge. Also, improve communication between patient and medical staff.
- 3) Bedside Station provides various information such as patient schedule, medicine information and operation progress for the patient caregiver.
- 4) Patient can order meal and menu, also use TV and internet service through Bedside Stations

Smart Bedside Stations

“ Because of the smart bedside, the hospital life was not boring. I could watch the TV conveniently and request a meal to the nurse, I knew well what medicine I was eating.”

Mr. Yoon (HM Hospital)

## Medical Smart Solution

Easy

There is no need to enter information or connect devices to monitor fluid. It starts just by applying IV.

Monitoring

It can be run alone without a server connection. Once connected to the server, the entire administration can be monitored centrally. Supports changes to monitor only responsible patients.

Mobility

It supports traceability for up to 2 hours of movement. You can extend the travel time by connecting an additional external battery. Future upgrades will help wheelchair and bedding installations.

Safety

Designed for various situations. Supports secure tracking while on the move. Damage and contamination prevention, and network instability.

Smart IV Monitoring

You can install it in your hospital. No additional server or network construction is required for installation. It can be used immediately by adapting to the requirements of the hospital environment.

**Do you need additional features?** Now we are listening to you to develop a complete solution. If you have any questions, please contact [sales@smartbedside.com](mailto:sales@smartbedside.com).

We have created a Smart Pole that reflects the various opinions of the hospital. Patients are wondering if the fluid is running regularly, and nurses must constantly visit because of the fluid they need to monitor for long periods. We have developed an affordable and reliable solution to solve these problems.

With Smart Pole, patients will be visited by nurses before the end of the infusion. It has an alarm system that the patient can immediately understand if the fluid velocity is abnormal or stops. With future mobile applications, you do not have to worry about when you will end up paying anymore.

MOBILE DEVICE INTEGRATION SYSTEMS

You can create dashboards that support a variety of environments. Dashboards for mobile and Internet browsers are available, starting with applications for PC.

**A convenient and robust solution is Smart Pole.**
